

Integritas Infrastructure Migration Profile

Integritas Consulting Group, LLC, an Integrity Monitoring and Risk Management consultancy, was created as the amalgamation of three firms, a capital management firm, and accountancy and a group of highly experienced Integrity Monitoring professionals.

The Group consolidated into new facilities in Moonachie NJ, and DCi was instrumental in relocating the three Information Technology infrastructures and consolidating them into a single environment capable of supporting the current needs and a planned rapid growth.

DCi migrated the infrastructure environment onto a Microsoft Server technology platform, a Cisco based network, and a Dell/Microsoft desktop environment. All systems were upgraded to the standardized operating and desktop environment; specialized accounting and management applications were ported and updated from the older versions. Firewall, Access Management and Security software was implemented on both the server and the workstations.

The Security software and Access Management software provides effective use of Mobility and IP Communications technologies, and enables remote access for staff and conferencing with partners in remote locations. All systems were wirelessly enabled to permit freedom of movement within the work space.

Voice, video, conferencing and data communication systems were integrated seamlessly to provide sharing of telecommunications resources and to maximize the efficiency and utilization of available bandwidth.

All engineering, procurement and integration activities and customer migrations, upgrades and enhancements were performed with minimal user inconvenience in less than one month from design to completion.
